

Analysing the Data

Specifically, the Curriculum Leadership Team examines learning outcomes and disaggregates data in a variety of ways. Data assist us as we examine:

- Mathematics, spelling, writing, science, and reading curricular alignment with state standards;
- Professional development activities and courses for relevancy to the needs of staff members;
- Teaching strategies that promote differentiation of instruction;
- Critical and creative thinking and problem-solving skills; and,
- Data management and retrieval options so that teachers and administrators can access test results better to interpret data and to inform instruction.
